

# What's New in Microsoft 365 November 2025 Updates

<b>Application</b>	<b>Pages</b>
Microsoft Teams	2-6
Microsoft Outlook	6-8
Microsoft 365 Apps	8-9
Microsoft Intune	9-11
Microsoft Entra	12
Microsoft Admin	13-16
Microsoft CoPilot	16-23

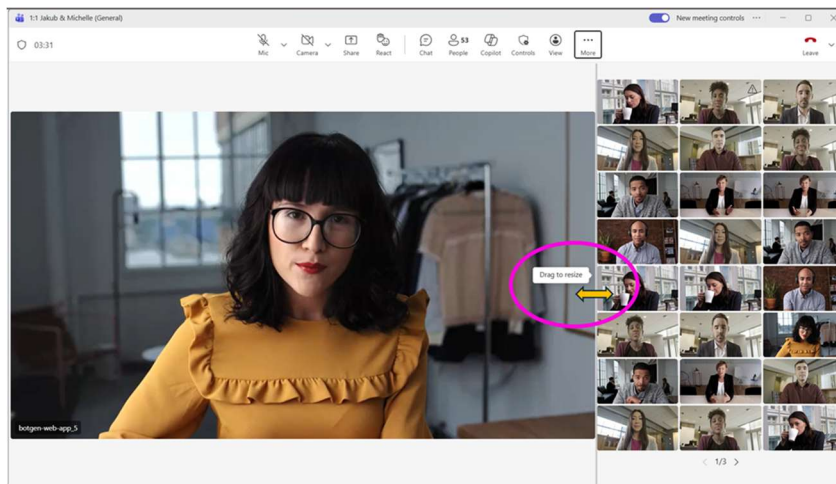

## Teams Updates

### *1. Flexible layout for Teams meetings with resizable divider*

#### New Feature

##### How this will affect your organization

We're introducing a new flexible layout option in future Teams meetings to give users more control over how shared content and participant videos appear. A resizable divider will let users adjust the space between shared content and the video gallery.

##### When will this happen:

early February 2026, expected completion by late March 2026.

### *2. Private chat for organizers and presenters in structured meetings, webinars, and town halls*

#### New Feature

##### How this will affect your organization

This separate chat enhances collaboration by allowing key participants to communicate privately before, during, and after the event, without involving attendees.

##### When will this happen:

mid-February 2026 and is expected to complete by late February 2026.

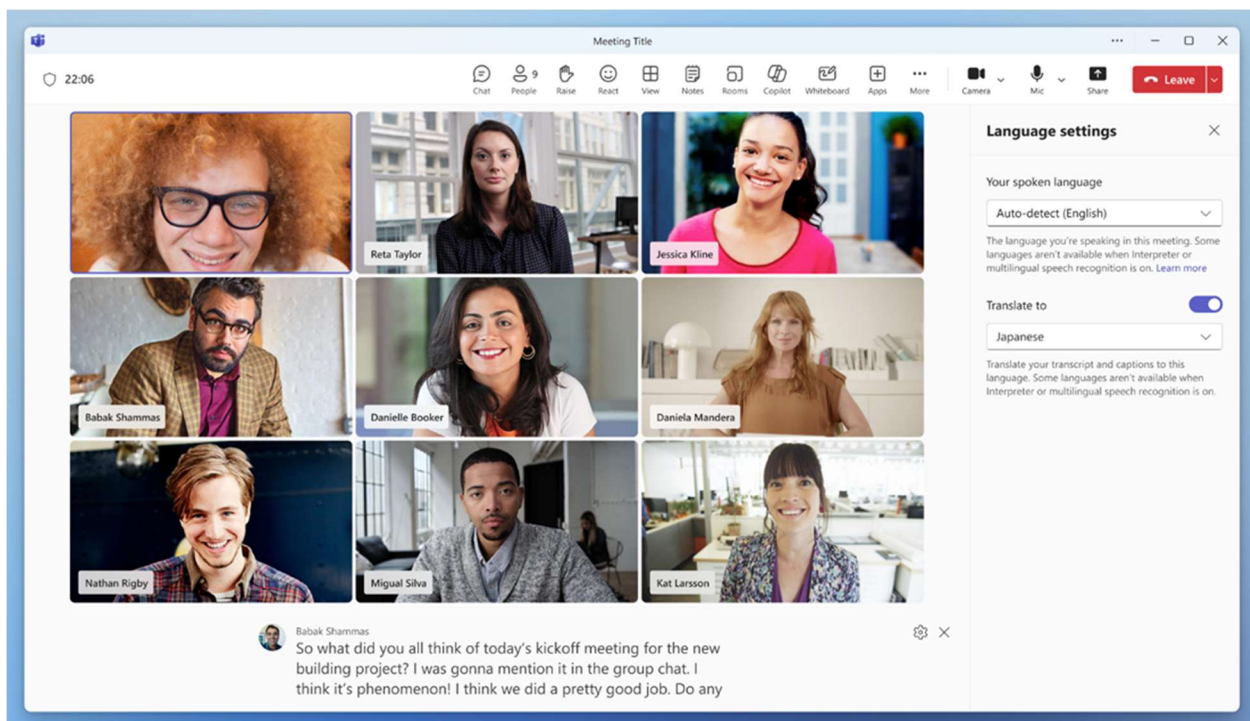

### 3. Enhancements to Interpreter and multilingual meeting experience

#### New Feature

##### How this will affect your organization

\*\*Requires a Microsoft 365 Copilot license\*\*

- **Automatic spoken language detection** - Teams now automatically detects and updates the spoken language across Interpreter, live captions, and transcription—no manual setup required.
- **“Preparing” status indicator** - A new visual cue shows when the Interpreter is initializing, helping users know when it’s ready.
- **Simplified settings** - Interpreter settings now include clear explanations for each option, making setup easier and reducing confusion:

##### When will this happen:

mid-December 2025 and expect to complete by late December 2025.

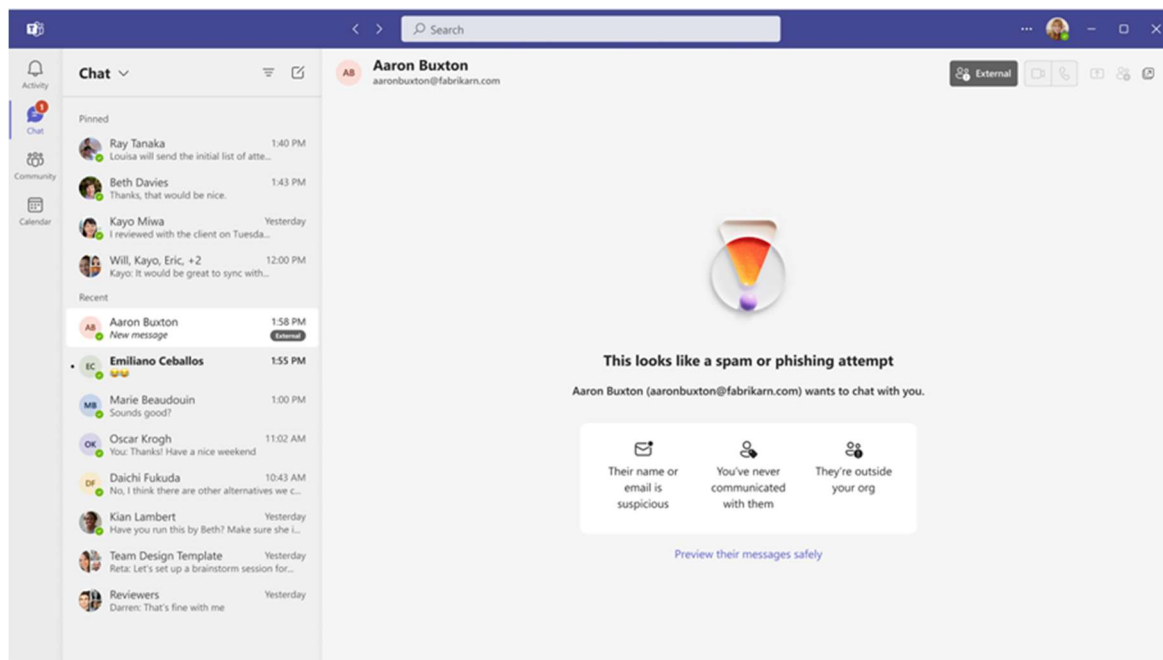

### 4. Protection against tenant-owned domain impersonation in Teams chat

#### New Feature

## How this will affect your organization

If your organization allows external domains to contact users in Teams, we will identify if an external user is impersonating a domain owned by your tenant during their initial contact through Teams chat. If we detect potential impersonation, we will show a high-risk alert to the user, notifying them to check for suspicious name/email and proceed with caution.

- **Before rollout:** Teams only scanned for brand impersonation risks.
- **After rollout:** Teams will **check for both brand and tenant-owned domain impersonation attempts**.

## When will this happen:

early December 2025 and expected to complete by mid-December 2025.

## 5. Prevent screen capture (Premium feature)

### New Feature

## How this will affect your organization

Helps protect sensitive meeting content by blocking screenshots and recordings across supported platforms. When enabled by the meeting organizer, this feature restricts screen capture using native device tools and most third-party apps.

Meeting options
×

Meeting access

**Advanced protection**

Roles

Production tools

Participation

**Recording & transcription**

Copilot and other AI

Turn off copying and forwarding of meeting chat and transcripts

When this is off, copying messages, links, transcripts, and AI-generated insights in the meeting recap will be disabled. Forwarding and sharing messages to Outlook will also be disabled.

End-to-end encryption

Apply a watermark to shared content

Apply a watermark to everyone's video feed

Prevent screen captures

Detect sensitive content during screen sharing

Organizers and presenters will get a notification when someone is sharing content that contains personal or other sensitive info. One notification will be sent for each piece of sensitive data.

Apply

### When will this happen:

early November 2025 (previously mid-October) and expect to complete by late November 2025 (previously late October).

## 6. Introducing simplified admin controls to manage external collaboration in Teams admin center

### New Feature

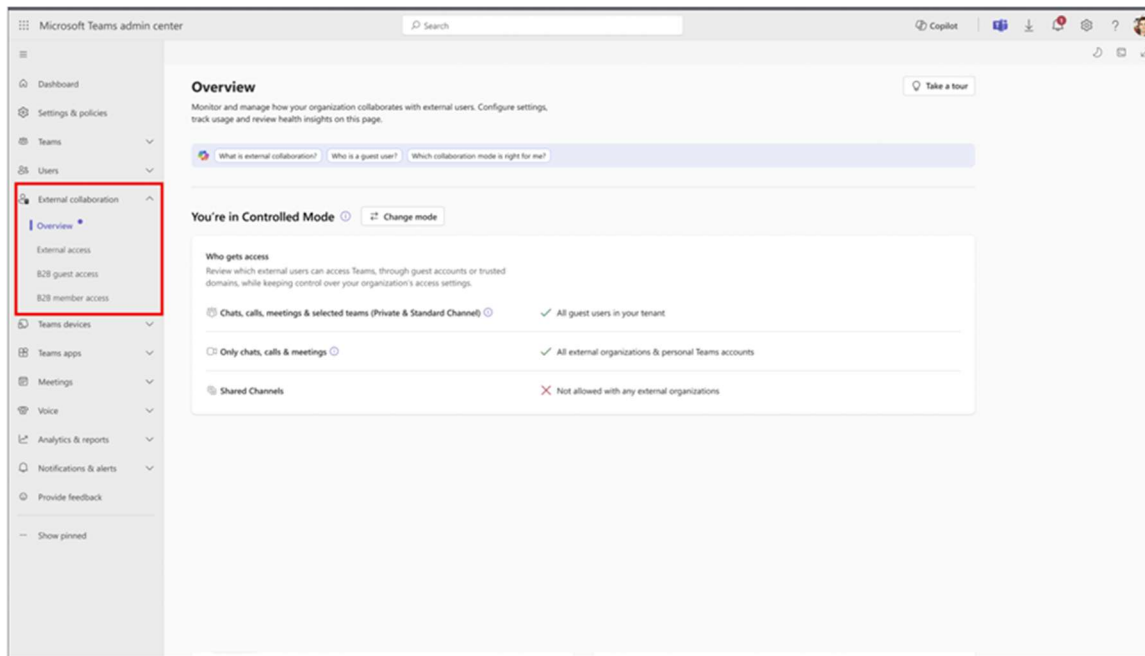

#### How this will affect your organization

Introducing a simplified external collaboration (EC) admin experience in Microsoft Teams to help administrators manage external collaboration settings more efficiently. This update introduces two predefined collaboration modes—Open and Controlled—as well as a Custom mode for organizations with unique requirements.

Admins can choose from three collaboration modes:

- **Open (Mode 1):**
  - Enables chats, calls, and meetings with all external domains and Teams personal accounts using federation or external access.
  - Allows Teams and channels collaboration with Microsoft and non-Microsoft partners using B2B collaboration and B2B direct connect.

- **Controlled (Mode 2):**
  - Aligns with current defaults for enterprise and EDU tenants.
  - Enables chats, calls, and meetings with all external domains using federation or external access.
  - Blocks collaboration in shared channels.
- **Custom:**
  - Provides full control over each external collaboration setting.
  - Allows manual configuration of org-wide external collaboration policies across chats, calls, meetings, Teams, and channels (including shared channels).
  - Changes in Custom mode apply only to Global org-wide policies and settings; they do not affect custom policies.

### When will this happen:

late January 2026; expected completion by early February 2026.

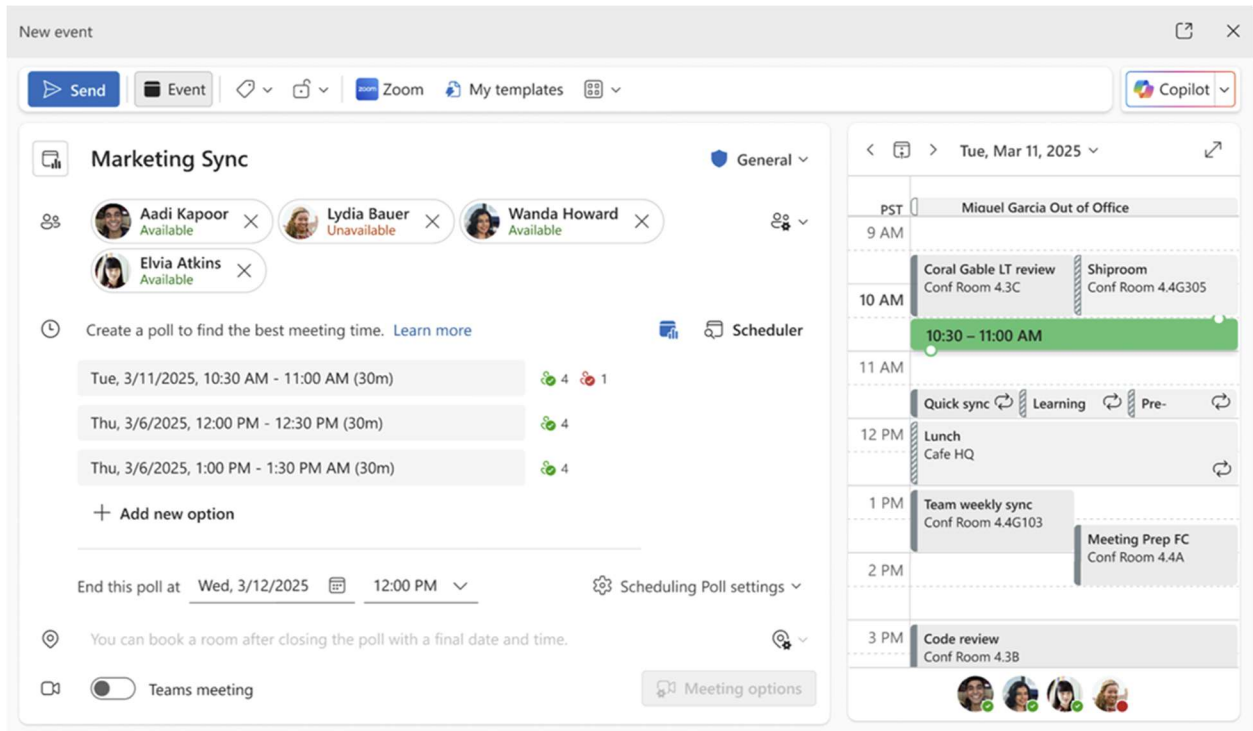

## Microsoft Outlook

### 1. Native polls integrated into New Outlook calendar compose form

## New Feature

### How this will affect your organization

This enhancement helps users propose multiple time slots and gather attendee preferences—especially useful when scheduling with external participants or individuals with limited availability.

### When will this happen:

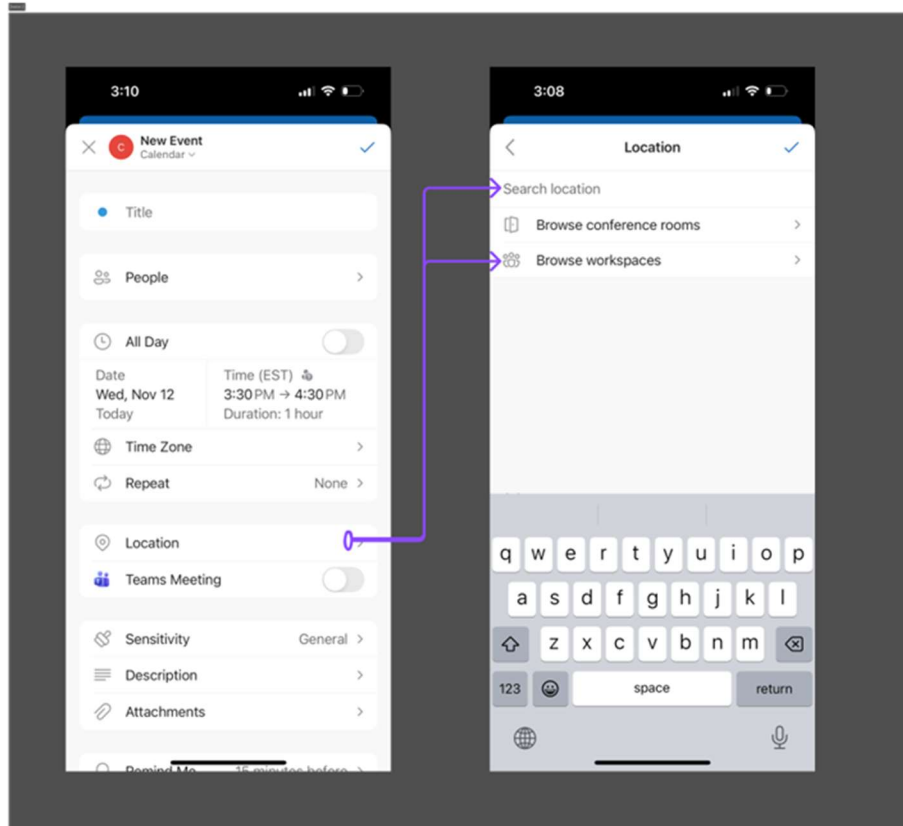

late October 2025 and is expected to complete by early December 2025.

## 2. Book a workspace when creating an event

## New Feature

### How this will affect your organization

To streamline workspace scheduling, users can now book a workspace directly from the location field when creating a calendar event.

### When will this happen:

early December 2025 and is expected to complete within the same timeframe.

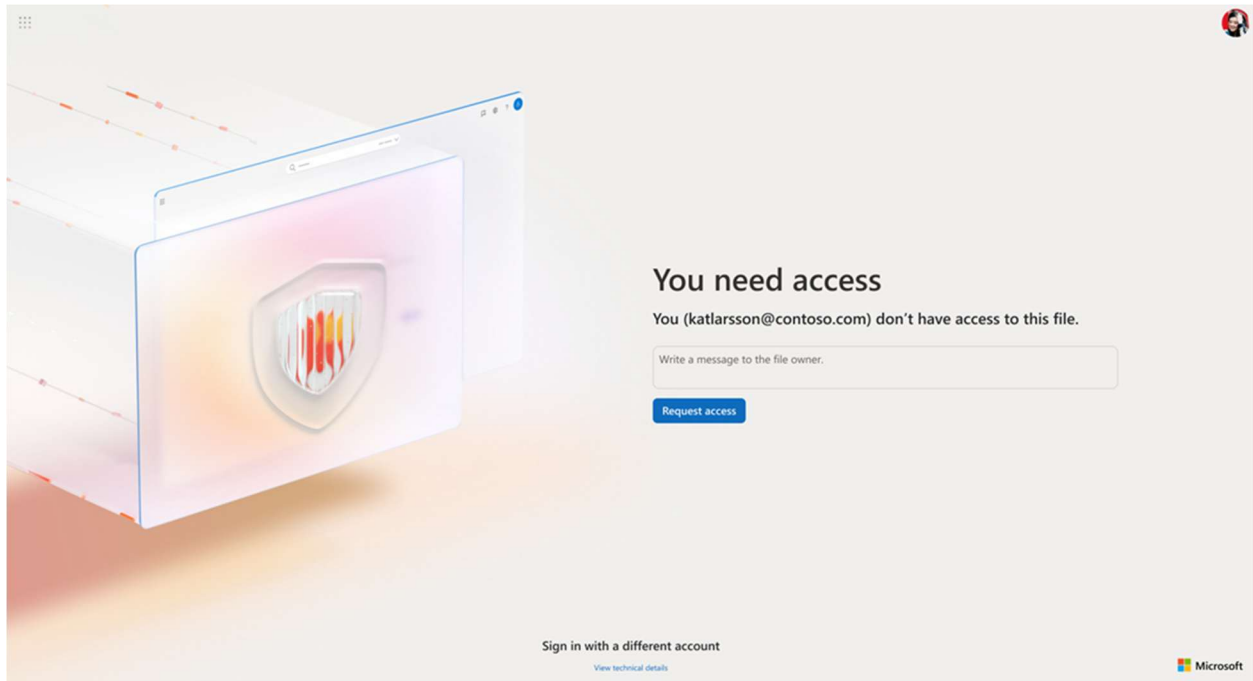

## Microsoft 365 Apps

### 1. Modern Access Request and Access Denied web page

## UI Update

### How this will affect your organization

Introducing a visual refresh of the Access Request and Access Denied page experience across Microsoft 365, redesigned to help users quickly request access to content such as documents, SharePoint sites, or Teams meeting recordings.

**When will this happen:**

early January 2026 and expect to complete by early February 2026.

**Intune**

*1. New Agents with Security Copilot*

**New Feature**

## How this will affect your organization

Change Review Agent, Policy Configuration Agent, Device Offboarding agent

Full Announcement: [What's new in Microsoft Intune at Ignite - Microsoft Intune Blog](#)

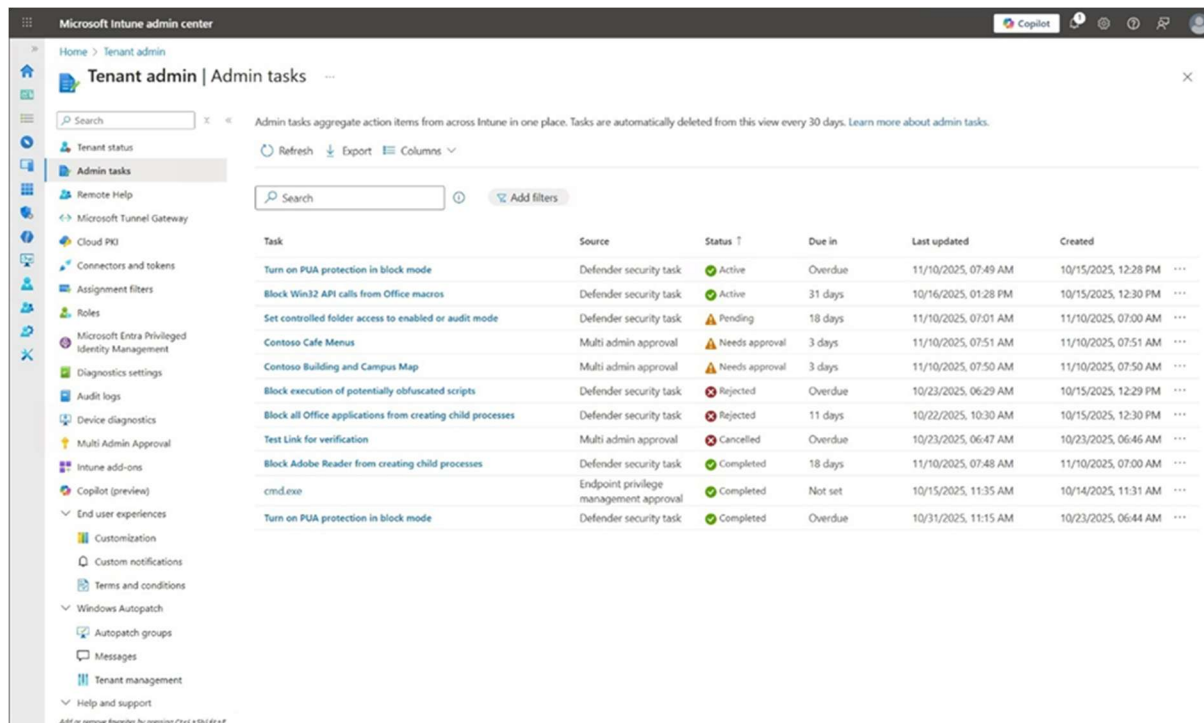

## 2. Admin Tasks

### New Feature

## How this will affect your organization

A centralized view for high-priority items, so admins can act quickly on what matters most. Today, that includes critical approvals like elevation requests, multi-admin approvals, and security tasks.

## When will this happen:

first quarter of calendar year 2026

## 3. Scalable Windows Resiliency with new recovery tools

### New Feature

### **How this will affect your organization**

- Quick machine recovery is a Windows capability that automatically detects, diagnoses, and remediates boot critical issues from WinRE, helping restore productivity without requiring hands-on, in-person intervention.
- Point-in-time restore for Windows, a new recovery capability that enables devices to be rolled back to a previous state within minutes.

### **When will this happen:**

Preview

## *4. Edge for Business to enable secure access for contractor-managed devices*

### **New Feature**

### **How this will affect your organization**

Microsoft Edge for Business is introducing a cost-effective solution that enables secure access to work resources on contractor-managed devices. Admins can currently support Bring Your Own Device (BYOD) scenarios on Edge for Business by using Intune Mobile Application Management (MAM). With this update, coming to preview beginning in January, those Intune MAM protections will extend to devices managed by other organizations.

Admins will be able to set up a MAM profile on an externally managed device, creating a controlled browser environment in Edge for Business

Full Announcement: [Scalable Windows Resiliency with new recovery tools - Windows IT Pro Blog](#)

### **When will this happen:**

preview in early 2026.

## Microsoft Entra

### *1. Soft deletion and restoration for cloud security groups*

#### New Feature

##### **How this will affect your organization**

To help organizations recover from accidental or malicious deletions, Microsoft Entra is introducing soft deletion and restoration for cloud security groups. This feature allows deleted groups to be restored within 30 days, preserving their settings, ownership, and membership—reducing the need to rebuild access models from scratch.

##### **When will this happen:**

late February 2026 and is expected to complete by early March 2026.

### *2. Synced Passkeys*

#### New Feature

##### **How this will affect your organization**

Microsoft Entra now supports synced passkeys from Apple, Google, and other credential providers, which offers easy registration and authentication experiences while protecting against phishing

##### **When will this happen:**

Currently in Preview

## Microsoft Admin

### *1. Upcoming Changes to Entra Identity Protection Alert Settings in Defender XDR*

#### New Feature

##### How this will affect your organization

To improve alert clarity and reduce fatigue, Microsoft Defender XDR is introducing enhanced configuration options for identity-related alerts from Entra ID Protection.

- Alert ingestion logic will now be explicitly tied to Entra ID Protection risk levels.
- Admins can choose which alerts to ingest into Defender XDR based on:
  - High risk detections only
  - High + Medium risk detections
  - All detections
- Updated UI strings and visuals will improve clarity and usability.
- The default setting is changing from ingesting alerts of all severities to ingesting only alerts with severity = High. As a result, you may notice a reduction in alert volume, and some alert types will no longer be ingested into Defender XDR. You can always change the default setting to any of the other options - High + Medium or All detections, according to your organization's needs.

##### When will this happen:

public preview starting December 11, 2025.

### *2. Copilot for Business*

#### License Update

##### How this will affect your organization

New Copilot license for SMB (under 300 users). Same Copilot capabilities for \$21/u/m (vs 30)

Full Breakdown: <https://tminus365.com/microsoft-365-copilot-for-business-what-you-need-to-know/>

**New!** Microsoft 365 Copilot Offerings in market today

## 3. Security Copilot included in E5

### License Update

#### How this will affect your organization

Security Copilot will be included for all Microsoft 365 E5 customers in the upcoming months - bringing agentic AI in the daily workflow. Customers will receive a 30-day advanced notification before activation. If you're already a Microsoft 365 E5 customer using Security Copilot, you can access this benefit at no additional cost.

Rollout starts November 18, 2025, for existing Security Copilot customers with Microsoft 365 E5, and will continue in the upcoming months for all Microsoft 365 E5 customers. Customers will receive a 30-day advanced notification before activation.

Full Announcement: [Agents built into your workflow: Get Security Copilot with Microsoft 365 E5 | Microsoft Security Blog](#)

FAQs: [Learn about Security Copilot inclusion in Microsoft 365 E5 subscription | Microsoft Learn](#)

#### *4. Announcing Microsoft Baseline security mode*

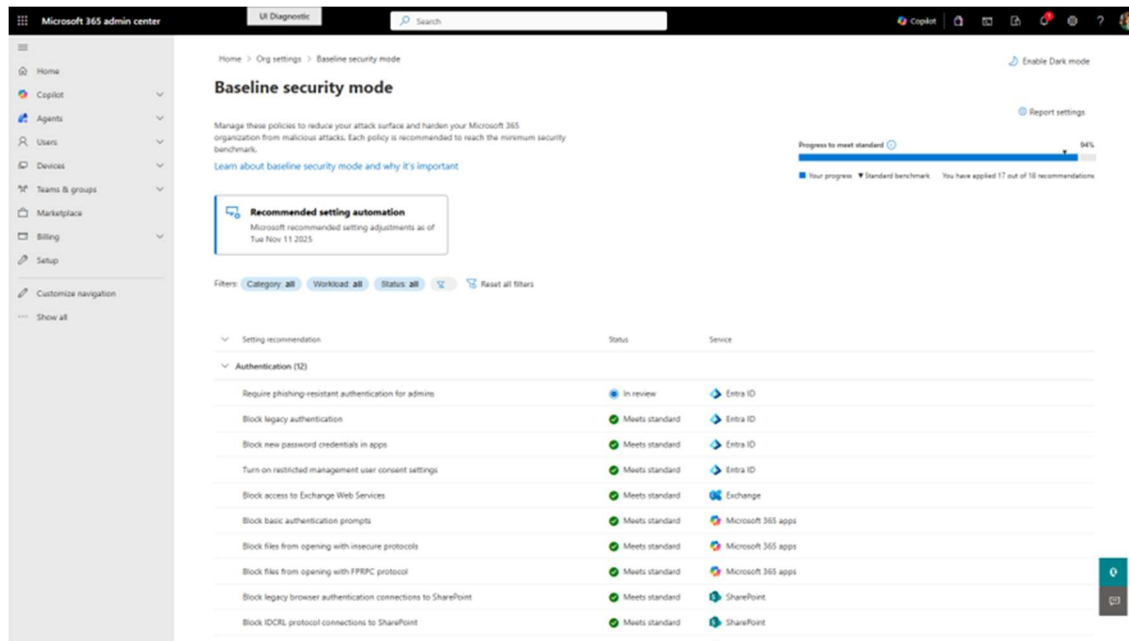

### New Feature

#### **How this will affect your organization**

Available in the Microsoft 365 admin center, BSM is simple to use yet offers advanced capabilities enabling you to easily:

- Disable legacy settings and enable secure-by-default configurations.
- Run simulations for complex settings to assess user and app impact.
- Deploy protections you have always wanted with just a few clicks.

**When will this happen?**

GA

## Microsoft Copilot

### 1. Microsoft Agent 365

#### New Feature

#### How this will affect your organization

Agent 365 brings observability at every level of the AI stack. Whether you create agents with Microsoft tools, open-source frameworks, or third-party platforms, Agent 365 helps you observe, manage, secure, and govern them.

More info: [Microsoft Agent 365: The control plane for AI agents | Microsoft 365 Blog](#)

**When will this happen?**

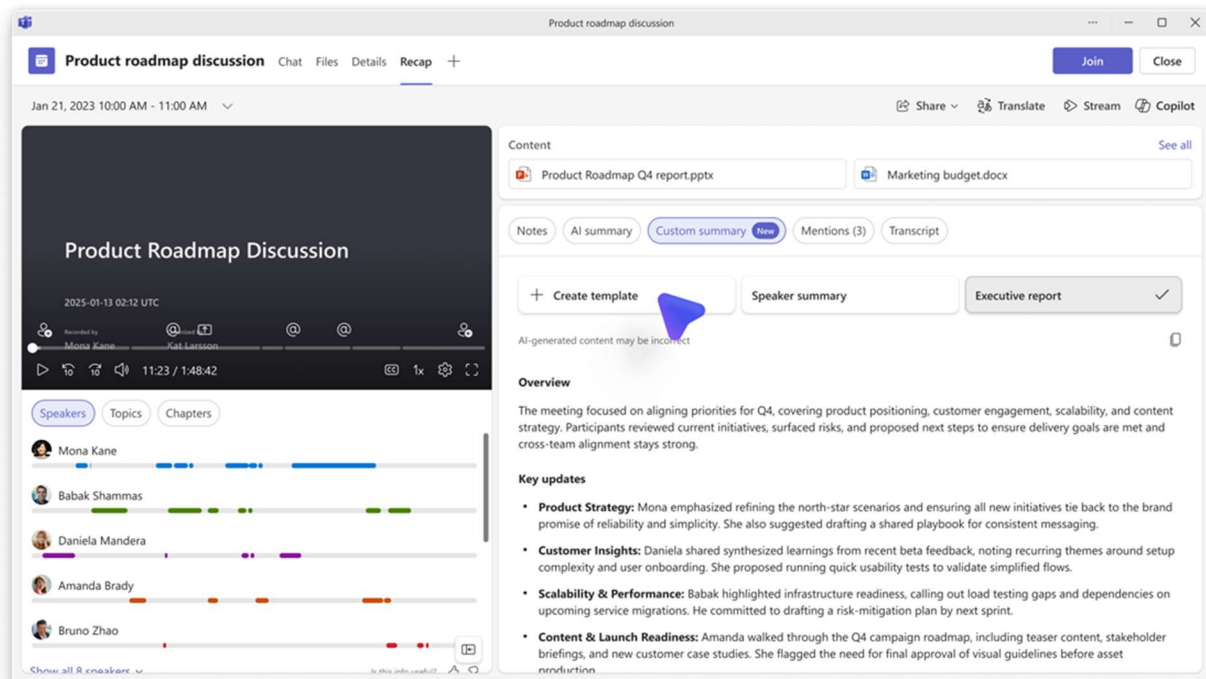

Preview (Frontier Program)

### 2. Microsoft Teams: Custom AI summary now available in Meeting Recap

#### New Feature

## How this will affect your organization

The Custom AI Summary feature allows Copilot users to create tailored meeting notes using sample content, instructions, or prebuilt templates.

## When this will happen

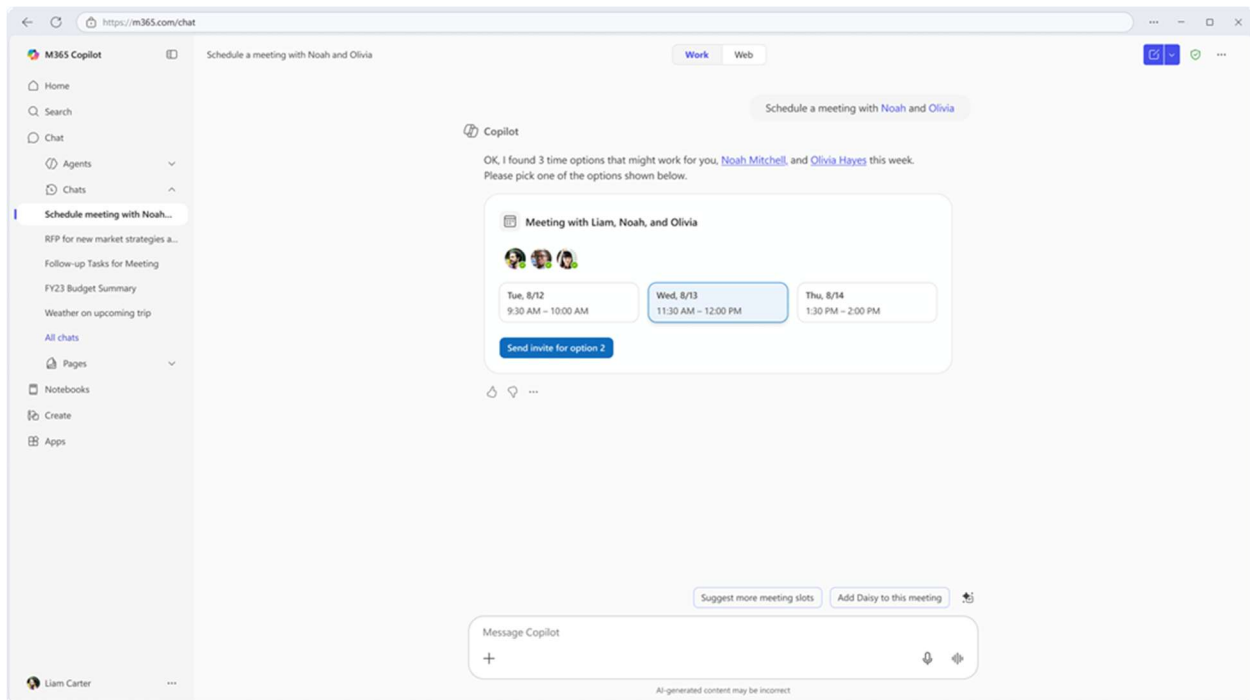

mid-December 2025 and is expected to complete by mid-January 2026.

## 3. Schedule meetings directly in Copilot Chat

### New Feature

## How this will affect your organization

This enhancement reduces context switching by allowing users to find available times, book rooms, draft agendas, and send invites—all within the chat experience.

## When will this happen?

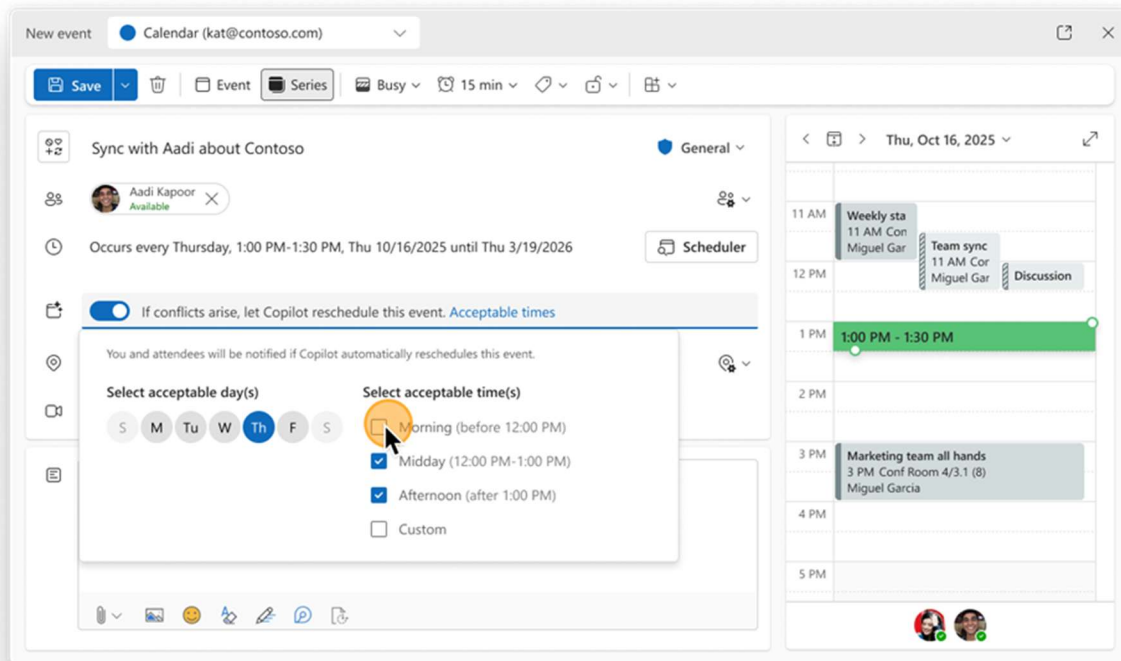

Rollout is beginning now and is expected to complete by late January 2026.

## 4. Copilot can now automatically reschedule 1:1 meetings and personal events based on your preferences

### New Feature

#### How this will affect your organization

Copilot is making it easier to manage scheduling conflicts by automatically rescheduling 1:1 meetings and personal events. Within the meeting event form, users can indicate which events are more flexible and allow Copilot to reschedule them if conflicts arise. Users can also set preferences for when rescheduled events should occur. Copilot will detect double-bookings and automatically move these flexible events to a better time—saving users time and reducing manual coordination.

### When will this happen:

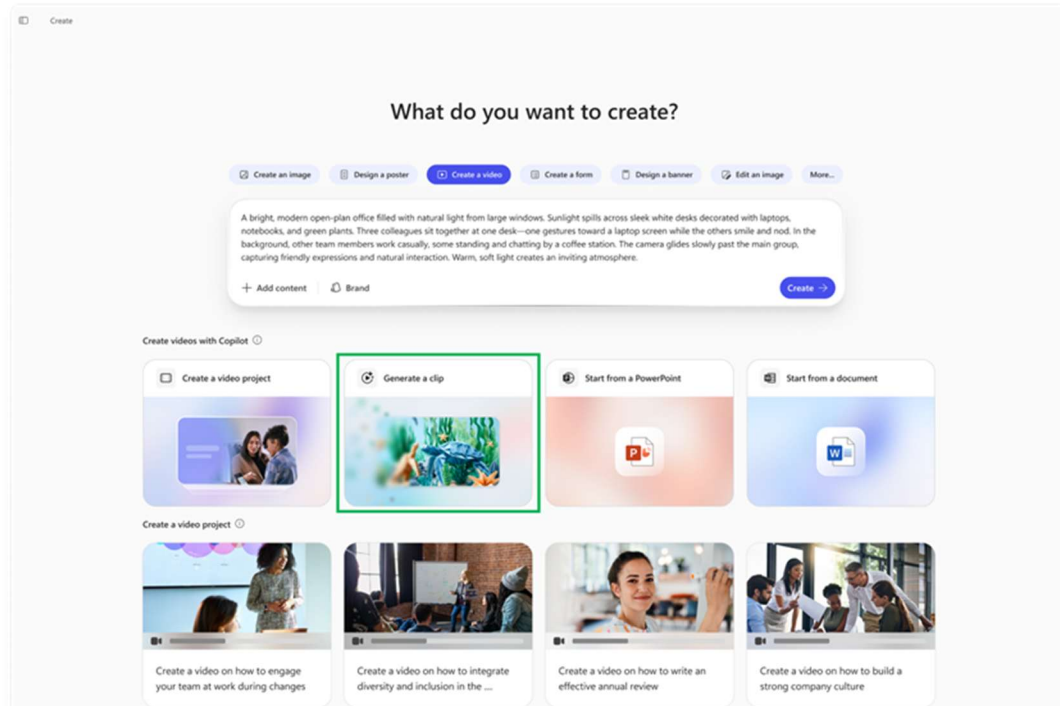

mid-November 2025 and expected to complete by late December 2025 (previously late November).

## 5. Microsoft 365 Copilot: OpenAI's Sora 2 available for video generation

### New Feature

#### How this will affect your organization

We're introducing OpenAI's Sora 2, an advanced video generation model, into Microsoft 365 Copilot. This integration enables licensed Microsoft 365 Copilot users in the Frontier Program to create short, AI-generated videos using natural language prompts. The feature helps organizations accelerate creative workflows while maintaining enterprise-grade security and compliance.

### When will this happen:

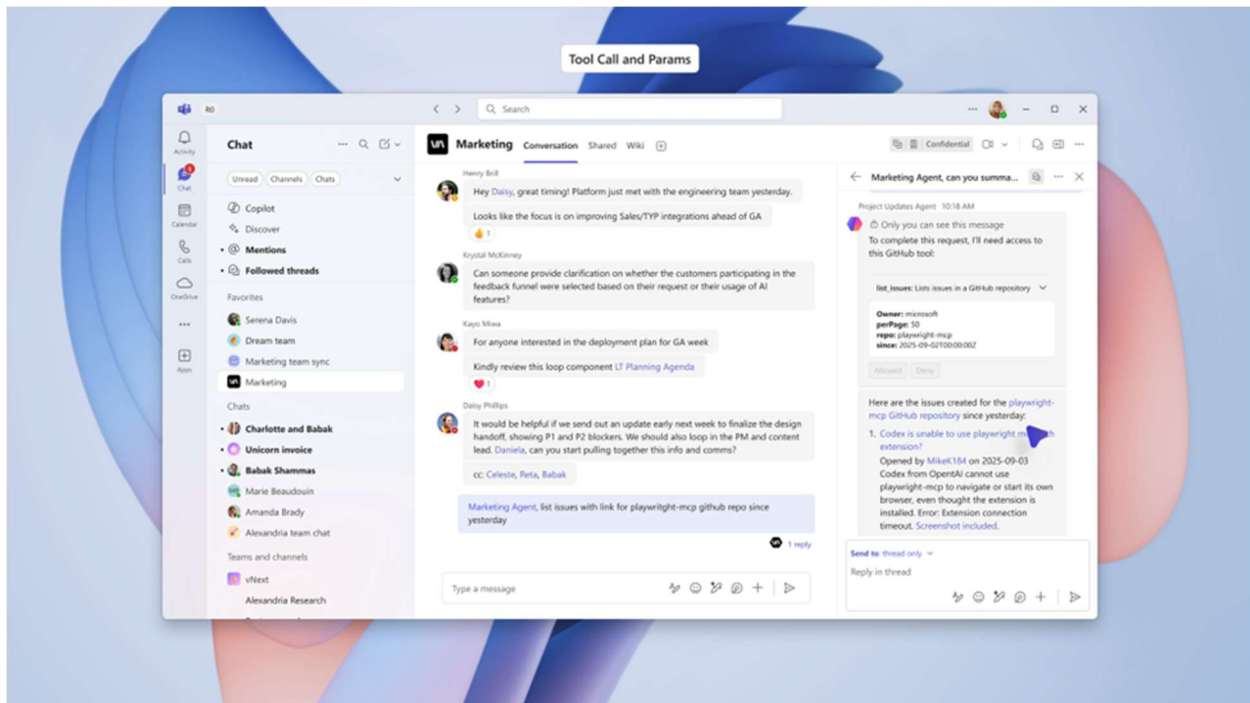

Preview (Frontier): Available now for Microsoft 365 Copilot licensed users in the Create experience under the Frontier program.

## 6. Microsoft Teams: Channel agent orchestration with GitHub, Asana, and Jira via Model Context Protocol (MCP)

### New Feature

#### How this will affect your organization

Enables Channel Agent to orchestrate tasks with select third-party Model Context Protocol (MCP) servers, including GitHub, Asana, and Atlassian (JIRA). This integration supports collaborative workflows that reflect real human teamwork, allowing agents to transparently reason through tasks and gather information across tools.

### When will this happen?

mid-November 2025 and is expected to complete by mid-December 2025.

## 7. Agent Mode in the Office apps

### New Feature

#### How this will affect your organization

Now you can create world-class Office artifacts whether you start in Copilot chat or in the apps. With Agent Mode in Excel, users can now choose between Anthropic and OpenAI reasoning models. Agent Mode in Word is now generally available, and Agent Mode in PowerPoint is now available via the Frontier program. And new Word, Excel, and PowerPoint Agents allow you to create high-quality documents, spreadsheets, and presentations in Copilot chat. Available via the Frontier program.

### When will this happen?

Preview (frontier program). GA for Agents in Excel.

## 8. Voice turns Microsoft 365 Copilot into your thought partner

## New Feature

### How this will affect your organization

Earlier this month we announced voice in the Microsoft 365 Copilot mobile app. Today, we're expanding that offering, introducing voice in Microsoft 365 Copilot app on desktop and the web, as well as in the Microsoft 365 apps, starting with Outlook, Word, and PowerPoint, and a new wake word "Hey Copilot" – an opt-in feature to start a voice chat hands-free on Windows devices.

Full Announcement: [Voice turns Microsoft 365 Copilot into your thought partner. | Microsoft Community Hub](#)

### When will this happen?

GA

## *9. New Copilot Chat value for users without a Microsoft 365 Copilot license*

## New Feature

### How this will affect your organization

Copilot Chat will provide even more value in Outlook, Word, Excel and PowerPoint for users without a Microsoft 365 Copilot license.

### When will this happen?

In preview by March 2026

## *10. Updates to Microsoft Purview address key security issues*

## New Feature

### How this will affect your organization

Microsoft Purview Data Loss Prevention (DLP) for Microsoft 365 Copilot will help ensure sensitive information stays protected. If a prompt includes confidential data such as credit card numbers or personal details, Microsoft Purview DLP for Copilot prompts, now in preview, will block Copilot and agents from responding, so that the sensitive information will not be used for grounding in Microsoft 365 or through a web search.

Overshared link remediation, now in preview in Microsoft Purview Data Security Posture Management (DSPM) for SharePoint, will enable admins to identify and fix overshared links at scale, reducing exposure and strengthening compliance. Microsoft Purview AI Observability in DSPM, now in preview, will provide full visibility into all agents, helping security teams make informed decisions and proactively manage risk.

**When will this happen?**

Preview

## *11. Edge for Business introduces Copilot Mode*

### **New Feature**

**How this will affect your organization**

Microsoft Edge for Business will soon support summarization and contextual grounding with Microsoft 365 Copilot Chat. This enhancement enables users to ask Copilot questions about multiple open browser tabs, Microsoft 365 documents (such as Word, Excel, PowerPoint), and YouTube videos directly from the Edge side pane. Agent Mode: Makes the browser capable of taking actions on a user's behalf with multistep workflows on IT-approved websites.

**When will this happen?**

Preview
